IUT de Vannes - South Brittany University

- Apprenticeship with Météo France
- Advanced computer science studies
- Areas:
  - IT: algorithms, embedded system, computer architecture, ...
  - Advanced lessons : cybersecurity, artificial intelligence
  - Data: sql, nosql, big data
  - Mathematics
  - Project management and communication

2018

Work experience

Software engineer apprentice
Orange Labs Rennes | 2020-2022

During two years, I worked among a web development team to build and create a common code base for Orange TV. A major part of my experience in Orange was about studying frameworks for this new project (React, Angular and Vue) and then contributing to this project with a focus over performance in order to have a fluent application on devices with poor resources.

Software developer apprentice
Meteorological Spatial Center of Lannion | 2019 - 2020

During one year, I developed the Lightning program, a synthetic image producer able to transform digital data coming from American satellites to images and videos for media and weather forecast.
